

COSMELAN

The Nr. 1 peel in the world

The Cosmelan Depigmenting Peel uses advanced technology to inhibit melanin production, targeting hyperpigmentation, dark spots, and uneven skin tone.

This treatment is suitable for most skin types and involves a two-step process: an in-clinic application followed by a detailed home care regimen.

This is an intensive treatment.

35 minutes for in-clinic peel application with peel left applied for 8-12hours.

The Cosmelan Depigmenting Peel works by inhibiting melanin production, the pigment responsible for skin discoloration.

This treatment targets hyperpigmentation, dark spots, and uneven skin tone, promoting a more even and radiant complexion.

The process involves an in-clinic peel application and a comprehensive home care regimen, ensuring long-lasting results and enhanced overall skin health

After a comprehensive skin consultation and analysis to confirm your suitability for this intensive peel, your Skin Therapist will thoroughly cleanse your skin in preparation for the Cosmelan Depigmenting Peel.

The peel will be applied and left on your skin for 8-12 hours.

Your therapist will advise you on the precise removal time.

Following this, we will discuss the strict home care routine to develop results and ensure your skin remains well-supported throughout the depigmenting process.

The Cosmelan Depigmenting Peel is suitable for individuals concerned with melasma, sun damage, and pigmentation.

This is an intensive peel that requires strict observance to the home care routine and avoidance of sun exposure.

It is not recommended for those currently using or who have used Roaccutane within the last 12-18 months, or for those with impaired barrier function (e.g., dermatitis, psoriasis, eczema, or rosacea).

Your skin therapist will help you determine if this treatment is right for your skin's specific needs.

How it works

The cosmelan® Method uses a unique, two-fold action to treat and reduce pigmentation: **corrective** and **regulatory**.

Cosmelan's corrective action works by accelerating skin cell turnover at the surface, removing melanin accumulation and reducing the amount of melanin formed, which decreases the intensity of the spot.

Cosmelan's regulatory action targets the source of pigmentation by reducing melanin synthesis and blocking the transfer of melanin from the deeper layers to the skin's surface.

At Australian Skin Clinics, we offer 3 cosmelan® packages – Bronze, Silver and Gold. Each package comprises 4 weeks of skin preparation, in-clinic skin treatment and a dedicated at-home post treatment skin care program.

Cosmelan treatment is the most effective solution for hyperpigmentation. Book your appointment now and get the skin you've always wanted!
