LEARN HOW LETYBO HELPS REDUCE FROWN LINES

How do frown lines form?

Whether we're squinting at our smartphones, frowning while deep in thought, or simply showing our everyday emotions, we all do things that can create facial expression lines.

Overtime, repeated contractions of the involved muscles can cause glabellar lines to form: deepening wrinkles between the eyebrows also known as frown lines, furrows, and 11's. And it's not just age-related; some people can see these lines beginning to form in their 20's.

Trusted by millions

With more than 26 million vials sold globally Letybo has helped millions of people around the world to reduce the look of frown lines.

How quickly will I see results?

Some Letybo patients see visible effects within 24 hours, while most show improvement in 3 days.

How long will my results last?

In patients with moderate to severe frown lines, Letybo's results are proven to remain effective for 12 - 16 weeks.

How satisfied are patients after treatment?

74% of patients agree their results turned out great.

WHY LETYBO?

Letybo is used to temporarily improve glabellar frown lines in adults, which are the vertical frown lines between your eyebrows. It temporarily reduces muscle activity to noticeably smooth the look of frown lines, and has proven to be effective for adult patients of diverse ages and skin tones.

In clinical trials of 1200+ people, Letybo significantly reduced the negative psychological impact patients were experiencing because of their frown lines.

After treatment patient felt:

- More positive in their personal relationships, social interaction and daily activities.
- Less self-conscious, frustrated or unhappy about their frown lines
- Their appearance looked 2.4 years younger than their actual age

GET TO KNOW LETYBO

How does Letybo help reduce frown lines?

Letybo is a neurotoxin, which means it blocks the normal signals between the nerves and facial muscles. After treatment, Letybo temporarily prevents the muscles between the brows from furrowing as they usually would. This results in reduced repetitive motion, and visibly reduced frown lines.

What is treatment like?

Letybo is a one-step treatment that only takes about 10 minutes, so it's easy to squeeze into your schedule. Your practitioner might numb the skin first and then they'll inject the brow area. There's little to no downtime, and you can go right back to your normal activities.

Any side effects?

The most common side effect seen in clinical studies was headache (2.9%). All medicines can have side effects. If you do experience any side effects, most of them are minor and temporary. However, some side effects may need medical attention. If you have any concerns, or for a complete list of side effects, talk to your aesthetic practitioner, or see the Letybo CMI.
