

HIFU Non-Surgical Facelift

- Collagen Stimulation
- Wrinkle Reduction
- Skin Firming & Tightening
- Eye Lift
- Jawline Definition
- Facial Contouring
- Fat Reduction

HIFU Body Treatments

- Body Contouring
- Fat Reduction
- Skin Tightening, Firming & Lifting

RF Microneedle Body Treatments

- Skin Tightening
- Pigmentation
- Skin Tone
- Stretchmarks & Scars

FOCUSDUAL
BEFORE & AFTER

HIFU & RF MICRONEEDLING

HIFU & RF MICRONEEDLING

The Technology

HIFU

With High Intensity Focused Ultrasound (HIFU), we can target the deep structural layers of your skin with heat, without damaging the skin's surface. Focus Dual reaches the superficial musculoaponeurotic layer (SMAS), which has previously only been accessible through invasive surgery. The result is a natural looking lift with no post-surgery downtime or scarring.

RF Microneedle

Radio Frequency (RF) Microneedling uses Bi-polar radiofrequency to activate the skin's natural healing process. When the microneedles penetrate the skin, a natural healing process triggers the production of new collagen-rich tissue. Combined with the bi-polar RF, Focus Dual offers shorter treatment times, less trauma and reduced downtime.
